Climate neutral collection Ex4
Ski gloves and ski clothing

High-quality and climate neutral

Master glove maker Frank Ziener from the Ore Mountains founded his glove making factory in Oberammergau in Upper Bavaria in 1946. Now in its third generation, Ziener manufactures technically innovative gloves for winter sports and biking, and has long been among the market leaders for winter sport gloves in Europe.

From the 2020/2021 winter season, the company is going a step further when it comes to climate protection: its facility and the Ex4 collection with ski clothing and ski gloves is becoming climate neutral.

Climate neutral gloves and more

Climate neutral means: we have recorded the carbon emissions at all our facilities and for our Ex4 collection and offset them through carbon offset projects.

1. Calculate carbon emissions

Together with ClimatePartner, we calculated all the carbon emissions arising at the facility in Oberammergau and as a result of the production of the Ex4 collection.

2. Avoid and reduce CO₂

In Oberammergau, we get emission-free green power. We focus on durability and high-quality materials for our products.

3. Offset carbon emissions

We offset all our unavoidable emissions through our forest conservation carbon offset project in Mongolia and our mountain forest project in Oberallgäu.

4. Marked as climate neutral

The clothing and gloves in the Ex4 collection are marked as climate neutral through the ClimatePartner label. You can use our ID number to follow how our carbon emissions are being offset on www.climatepartner.com – certified by TÜV Austria.

How does a carbon offset project work?

Carbon offset projects demonstrably reduce greenhouse gases, e.g. through afforestation or renewable energies. Independent organisations like TÜV, SGS or PwC check the exact level of reduction. The project operators can finance the project by selling certified reductions in emissions.

Mountain forest project Oberallgäu www.climatepartner.com/1048

Forest Protection Inner Mongolia www.climatepartner.com/1109

Our carbon offset projects: **Mountain forest project in Oberallgäu**

The mountain forest in Oberallgäu was severely damaged by the winter storms Vivian and Wiebke in 1991. Volunteers are planting silver firs and sycamores for a stable mixed forest which can resume its function of providing protection against storms and other effects of climate change.

We're also supporting a carbon offset project in Inner Mongolia.

Good reasons for climate neutral products

- You'll contribute to global climate protection efforts and support recognised carbon offset projects.
- You can reinforce your climate protection strategy with specific actions.
- You have an additional argument in the line of arguments for sustainable products and you can convince environmentally-conscious customers.
- Full transparency: your emission compensation can be traced using the ID number – verified by TÜV Austria.
